

## Subject: Final Considerations and Decision on Race Participation

Dear Team,

Thank you for the engaging and insightful discussion during our recent Google Meet. Your perspectives are invaluable as we reach a consensus on whether to compete in today's race.

I have reflected deeply on our conversation and examined the historical race data again. The attached graph underscores our journey so far – it illustrates a team that, despite some setbacks, has predominantly found success. Notably, the last two races post the new engine-prep procedure indicate a promising upward trend in our performance.

Here is the distilled essence from our graph and discussions:

- **Performance Trajectory:** We have finished in the top 5 in half of our races, and our total successes (17) far outweigh the instances of engine failure (7). This speaks to our team's resilience and technical prowess.

- **Learning Opportunity:** Participating today is not merely about the race itself but the invaluable data and experience we will gain, which could be pivotal for our future races.
- **Strategic Risk Management:** While acknowledging the risks, I believe the potential benefits – in terms of visibility, sponsor relationships, and team morale – could be substantial.
- **Engine Reliability:** Our engineers have implemented new prep procedures, and we have seen immediate positive results. Racing today would be a testament to their hard work and a real-world test of our improvements.

**Conclusion:**

Considering these points in mind and the confidence expressed in our capabilities, I propose that we race. However, this decision is not mine alone – Park Racing thrives because of our collective spirit. Please review the graph one last time and share any final thoughts or concerns. Let us make a decision that we all stand behind, fully aware of the risks and united in our desire for success.

I am looking forward to your final input.

Warm regards,

Avinash Bunga
